

Hope & Healing After a Work Injury

Stephen's Story

Regaining Independence and a Fulfilling Life with Specialized Neurorehabilitation

A work-related fall from a 12-foot ladder resulted in Stephen suffering a traumatic brain injury (TBI). After months in the hospital, he struggled with significant challenges, including impaired mobility, difficulty using his hands, and an inability to live independently.

That's when Stephen found hope at Bancroft NeuroRehab. Through our comprehensive rehabilitation programs, he received the structure and support he needed to reclaim his abilities. Stephen benefited from both day and residential programs, allowing him to gradually transition back to independent living at his own pace.

**Bridging the gap between
current limitations and
futures of possibility.**

Stephen's Success

Thanks to Bancroft NeuroRehab's personalized care, Stephen is thriving. He's regained independence, driving his car again, and reignited a distant passion – drawing. He volunteers at a horse farm – combining his love for animals with artistic expression. Each day brings him closer to returning to work and living a fulfilling life.

Helping Injured Workers Return to Work and Life

Comprehensive Neurorehabilitation Programs Tailored to Workers' Comp Needs

At Bancroft NeuroRehab, we understand workers' unique challenges with work-related neurological conditions. Our experienced team specializes in helping them achieve optimal recovery and a successful return to work.

We Offer:

- **Proven Programs:** Outpatient therapies, day programs and residential rehabilitation designed to address specific needs.
- **Experienced Therapists:** A dedicated team of physical, occupational, speech and cognitive therapists passionate about patient success.
- **Focus on Functional Outcomes:** We help patients regain skills for daily living and work reintegration.
- **Seamless Communication:** We collaborate with case managers, employers and insurance providers to ensure a smooth recovery journey.
